Veterinarian section

Examining veterinarian's name Kristen Wylie	Date of current examination (dd/mm/yy) 16-09-2019
---	---

Patellar Examination Results (tick boxes)

1. Normal

right left

2. Patellar Luxation

bilateral
 unilateral right left
 luxated medial lateral
 luxation is: intermittent permanent
 age of onset < 2 months 2-6 months
 6-12 months >12 months

3. Classification of luxation

Grade 1 - The patella easily luxates manually at full extension of the stifle joint, but returns to the tochlea when released.
 Grade 2 - There is frequent patellar luxation which, in some cases becomes more or less permanent.
 Grade 3 - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.
 Grade 4 - The tibia is medially twisted and the tibial crest may show further deviation medially with the results that it lies 50 degrees to 90 degrees from cranial/caudal plane.

I certify that the examination was performed according to the ABS procedure

I DID verify tattoo/microchip information on this dog
