Examining veterinarian's name <i>Dr K Joyce</i>	Date of current examination (dd/mm/yy) 26 Jun 2021

Patellar Examination Results (tick boxes)

1. Normal

right left

2. Patellar Luxation

bilateral

unilateral right left

luxated medial lateral

luxation is: intermittent permanent

age of onset < 2 months 2-6 months

6-12 months >12 months

3. Classification of luxation

Grade 1 - The patella easily luxates manually at full extension of the stifle joint, but returns to the tochlea when released.

Grade 2 - There is frequent patellar luxation which, in some cases becomes more or less permanent.

Grade 3 - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.

Grade 4 - The tibia is medially twisted and the tibial crest may show further deviation medially with the results that it lies 50 degrees to 90 degrees from cranial/caudal plane.

I certify that the examination was performed according to the ABS procedure

I DID verify tattoo/microchip information on this dog I DID NOT verify tattoo/microchip information on this dog
