**Animal/Herd:** RAIDEN JACK NAPIER

All client, owner and animal details supplied by the submitter.

 Tests Requested:  
 1 x Urine - Urine Protein Creatinine Ratio

**Chemistry - Cumulative**

	CH2107802 17/04/2021 RAIDEN JACK NAPIER	Units	Ref Interval
U. Protein (g/l)	0.09	g/L	
Urine Creat	11376	µmol/L	
Urine Protein/Creat Ratio	0.07	RATIO	

Renal proteinuria is defined as persistently elevated UP/Cs greater than 0.5 in dogs, &amp; &gt; 0.4 in cats in which pre- and postrenal proteinuria has been ruled out. They may be of glomerular or tubulointerstitial origin. UP/Cs greater than 1-2.0 are strongly suggestive of glomerular disease.

 IRIS (International Renal Interest Society [www.iris-kidney.com](http://www.iris-kidney.com)) recommends that at least 3 urine samples are collected over a period of at least 2 weeks for sub-staging renal disease.

UP/C value	Dogs	Cats	Substage
< 0.2	< 0.2	< 0.2	Non-proteinuric
0.2-0.5	0.2-0.5	0.2-0.4	Borderline proteinuric
> 0.5	> 0.5	> 0.4	Proteinuric

 Test methodology references are available on request.  
 Opinions and interpretations of test results expressed in this report are outside the scope of the laboratory's terms of accreditation.  
 (Note: Results apply only to samples received, on an as found basis. Reference intervals are standard Gribbles Veterinary reference intervals.)  
 A \* indicates the test is outside the scope of the laboratory's IANZ accreditation.

**Signed** Robyn Winters  
 (Technician - Ch)

**Report Date:** 19/04/2021 12:00

**Final**

Gribbles Veterinary Pathology make every effort to collect, analyse and report the results of tests accurately and promptly but accepts no responsibility for any factors which influence the results that are beyond our control. This report should not be reproduced except in full. All sample identification supplied by the submitter.
