### Patellar Examination Results (tick boxes)

#### 1. Normal

right  left

#### 2. Patellar Luxation

bilateral  
 unilateral  right  left  
 luxated  medial  lateral  
 luxation is:  intermittent  permanent  
 age of onset  < 2 months  2-6 months  
 6-12 months  >12 months

#### 3. Classification of luxation

**Grade 1** - The patella easily luxates manually at full extension of the stifle joint, but returns to the tochlea when released.  
 **Grade 2** - There is frequent patellar luxation which, in some cases becomes more or less permanent.  
 **Grade 3** - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.  
 **Grade 4** - The tibia is medially twisted and the tibial crest may show further deviation medially with the results that it lies 50 degrees to 90 degrees from cranial/caudal plane.

I certify that the examination was performed according to the ABS procedure

I DID verify tattoo/microchip information on this dog
